

Júlio Braga is a Civil Protection Engineer with a Master's degree in Emergency Management and Rescue and a postgraduate qualification in Emergency and Crisis Management. He currently serves as Municipal Civil Protection Coordinator for Santo Tirso, Portugal, where he leads the Municipal Civil Protection Service and supports operational coordination within the municipal emergency response system.

He has extensive experience in emergency response, rescue operations, and crisis management, having previously served in firefighter and rescue specialist roles, as well as instructor in professional firefighter training and crisis management environments.

Since 2022, he has served as an International Trauma Assessor for the World Rescue Organisation (WRO), contributing to the evaluation and development of international rescue standards and competitions.

His international experience also includes medical command and control roles in the Middle East, supporting complex emergency medical operations in high-demand environments.

He is actively involved in emergency response training, multi-casualty incident management, and rescue competitions, with a strong focus on operational excellence and continuous improvement in civil protection systems.
